

Research Lab Sheet

Lab Name	Algae and Algal Toxins
Academic Year	2022

Basic Information	
Department	Botany and microbiology
Location	Sohag University
Total area (m²)	

Lab Members				
No. of Prof.	No. of Ass. Prof.	No. of Lect.	No. of Ass. Lect. & Demonst.	No. of technicians
1	1	3	2	0

Device image	Description /use
	(ELISA Reader) ELISA stands for enzyme linked immunosorbent assay, it is an antibody test or a test for immune response to things attacking the body such as virus, bacteria and allergens. The test is done in an ELISA plate, also known as a 96-well plate or microplate. The ELISA reader reads the plate.
	(A centrifuge) It is a device that uses centrifugal force to separate various components of a fluid. This is achieved by spinning the fluid at high speed within a container, thereby separating fluids of different densities (e.g. liquids from solids). It works by causing denser substances and particles to move outward in the radial direction. At the same time, objects that are less dense are displaced and move to the centre. A centrifuge can be a very effective filter that separates contaminants from the main body of fluid.
	(Microscope with a digital camera) Microscope digital cameras allow you to view a live image from your microscope directly onto an LCD projector or a computer. This useful tool allows us to share specimens through a computer screen without having to actually look down less and stare at the specimens for ourselves.

	(Algal Incubator) It is a device used to grow and maintain algal cultures due to the ability to adjust both temperature and light.
	(An autoclave) It is used to perform sterilization of algal media
	(Electric oven) It is used for drying, heating, and to sterilize a large piece of equipment.
	(Vortex mixer) It is used for mixing laboratory samples in test tubes

(The hot plate stirrer or hot plate magnetic stirrer)
It is used for mixing and heating aqueous solutions for a great variety of chemical reactions such as synthesis.

(Electric balance)
It is used for precise measurement of chemicals which are used in various experiments. It provides digital result of measurement.

Evaluate the fulfillment of lab to appropriateness of areas, building installations, facilities and human resources standards

Areas of assessment		Indicators	Yes	Somewhat	No
Floor area and capacity	1	Adequacy of the total capacity of the lab for the number of researcher(1).		√	
Windows and doors	2	Availability of windows for adequate ventilations.		√	
	3	Ease of use of windows.		√	
	4	There are two exits (doors) at least (2).			√
	5	There are signs to locate directions of emergency exits			√
Equipment	6	Appropriate temperature during the lectures (3).		√	
	7	Availability of good ventilation (4).		√	
	8	The existence of adequate lighting (4).		√	
	9	Lab is connected to the Internet			√
	10	The existence of directions inside the Lab showing entrances and emergency exits.			√
Security and Safety	11	Existence of firefighting equipment near the hall (5).	√		
	12	Cleanliness of the room.		√
